

A woman with short dark hair, wearing a brown long-sleeved shirt, stands in a laboratory. She is holding a glowing, conical flask in front of her chest. The flask contains the text: "Millions like Jackie fight cancer while lifesaving treatments sit in here." The background is a dimly lit laboratory with shelves of glassware and equipment.

Millions
like Jackie
fight cancer
while lifesaving
treatments sit
in here.

CONGRESS SHOULD CONTINUE TO INCREASE RESEARCH FUNDING AT THE NATIONAL INSTITUTES OF HEALTH, or new treatments, prevention and detection tests may not reach patients like Jackie, a 16-year cancer survivor. Cancer death rates for black men and black women are disproportionately higher than in white men and women. We need research to better understand and reduce this unequal burden. To learn more about our efforts to increase funding for cancer research, visit [acscan.org/CancerResearch](https://www.acscan.org/CancerResearch).

Congress, increase research funding at the National Institutes of Health and save more lives.
