

we can't fight cancer
if we can't see it.

When it comes to cancer, screening is seeing. Centers for Disease Control and Prevention programs save lives through screening tests that prevent cancer and detect it early—but current funding isn't enough. Fewer than 1 in 5 eligible women have access to breast cancer screenings through a program with a 20-year record of success. 60% of cancer deaths could be prevented. It's time to take the blindfolds off and stop cancer before it starts.

**CALL 1-888-NOW-I-CAN AND TELL YOUR MEMBERS OF CONGRESS:
SCREENING IS SEEING. INCREASE FUNDING FOR CDC CANCER PREVENTION PROGRAMS.**
