Re: Notable findings from a statewide survey of likely voters in Nevada¹

Key Findings on Access to Health Care

1. Likely voters in Nevada place a high level of importance on **access to affordable cancer screening and treatment**. Fully 85% of likely voters in Nevada indicate that it is extremely (53%) or very (33%) important to them that all Americans, no matter what health insurance they have, should have access to cancer screening and treatment that is close to home and affordable.
 - This rating crosses the political spectrum, including Democrats (97% extremely/very important), Independents (86% extremely/very important), and Republicans (73% extremely/very important).
 - These attitudes are driven by personal experience. Fully 60% of Nevada likely voters have either been diagnosed with cancer themselves (6%) or have a family member who has been diagnosed with cancer (49%) or have someone close to them who has been diagnosed with cancer (21%).

NV

How important is it to you...

Is it extremely important, very important, somewhat important, not too important, or not at all important?

All Americans, no matter what health insurance they have, should have access to cancer screening and treatment that is close to home and affordable.

¹ Lake Research Partners and The Tarrance Group designed and administered this phone survey that was conducted June 30 to July 12, 2026, by phone (landlines and cell phones) using professional telephone interviewers and text to online (a portion of the sample received a text to their cell phone with a link to complete the survey online). The survey reached a total of 522 likely 2026 voters in Nevada. The margin of error is +/- 4.2%.

2. **Likely voters in Nevada are supportive of candidates who work to increase access to the healthcare people need.** Indeed, 76% of likely voters in Nevada indicate they would be more likely to vote (47% much more likely) to elect an official who was a leader in ensuring healthcare is affordable and accessible.
 - In addition, 60% of likely voters in Nevada say they would be more likely to vote (41% much more likely) to elect an official who was a leader in advocating for access to Medicaid insurance coverage.
 - This attitude is also seen when 91% of likely voters (74% strongly) agree with the statement: “Families across the country are feeling squeezed by rising healthcare and insurance costs. Leaders should focus on making care more affordable and protecting access to health services people depend on.

Key Findings on Tobacco Product Use and Prevention Programs

1. **Likely voters in Nevada also have a notable level of concern about young people in their community using tobacco products.** Fully 59% of likely voters in Nevada indicated they are very (33%) or somewhat (26%) concerned about this issue.
2. **This concern translates to likely voters in Nevada seeing a role for the government when it comes to kids and tobacco use prevention programs.** There is majority support for these efforts:
 - 62% support for programs to protect our kids from the dangers of tobacco industry marketing,
 - 55% support for educating the public on the dangers of tobacco use, and
 - 54% support for funding programs to protect our kids from the dangers of tobacco products.
3. **Voters’ concerns about tobacco use translate into support for raising revenue for programs that prevent tobacco use through a new tax on tobacco products.** In fact, 63% of likely voters in Nevada support a tobacco tax increase whose revenue would be dedicated to programs that prevent tobacco use (42% strongly favor). Similarly, 50% of likely voters in Nevada would be less likely to elect an official who had received large donations from tobacco companies (37% much less likely).

Final Thoughts

In sum, despite the increasing polarization across the public policy spectrum, likely voters in Nevada strongly support key concepts like cancer prevention programs, cancer screening programs, spending on funding for cancer research and prevention efforts as well as efforts to prevent young people from tobacco use. These voters stand ready to show their support for candidates who pursue these goals.
