Have you benefited from Medicaid?

Access to Medicaid breaks down barriers to health coverage, helping ensure that everyone, no matter their zip code, income, or color of their skin, has a fair and just opportunity to get and stay healthy.

Medicaid allows people to get regular check-ups to stay healthy, see a doctor when they are sick, detect diseases like cancer early to give them the best chance of surviving, access medications and treatments they need, and go to the hospital in an emergency.

We are working with lawmakers across the aisle to protect Medicaid access for people who are eligible and enrolled to make sure they can access prevention services, screenings, and treatment. By sharing your story, you can help put a face to this critical program.
