

17 years since
diagnosis

20 dream vacations
and counting...

Early cancer detection 17 years ago gave Ohio native Carrie time to make her dream vacations a reality. Today, breakthrough multi-cancer early detection tests have the potential to expand testing options for rare cancers by testing for dozens of cancers from a single drop of blood. Providing a pathway to Medicare coverage once these tests are FDA-approved and clinical benefit is shown will expand access to cancer innovation and make time for bucket lists. Literally.

Congress: Pass H.R. 2407 and S. 2085.

FIGHT CANCER : MAKE TIME
